

When it comes to installing ZWAG filters, Steri offers flexible structural solutions that can be made to fit any installation requirement. Our smaller filters can be skid mounted or fitted with wheels for portability. Larger unit can be fitted with legs, skirts, or mounting lugs that can be customized to fit your new or existing structure. And heavy duty wheels can be supplied for large bottom dishes.

Skid Mounted Units

Portable Units

ZWAG filters can be supplied as self-contained skid mounted units. The design of the filter vessel and the support structure are integrated during design. Mounting brackets welded to the filter are used to bolt the filter to the support structure. The support structure is designed for the specific needs of the application. Process compatible material is used for this structure which is fully welded. This type of support structure is available for units up to 0.5m².

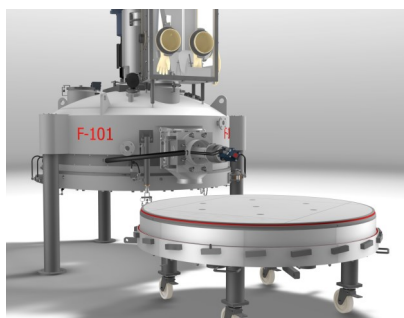

Custom Designs

Free Standing Units

On Wheels

On Support Legs

ZWAG filters of all sizes are available as free standing filter units. Free standing ZWAG filters can be designed with integral legs or one piece skirts. Smaller units with integral legs can be fitted with wheels for portability.

Self Supporting

Client Structures

Steri can design a ZWAG filter to fit into new or existing infrastructure within your facility. Working with your facilities team, our engineers can provide detailed engineering support. Support that includes structural calculations, adjacent equipment clearances and equipment layout recommendations, all resulting in detailed structure fabrication and installation drawings.
